Course Description

Since the introduction of modern design-oriented computer software, the concrete industry has tended to concentrate on the structural design aspects of reinforced concrete and, as a result, the importance of durability has often been over-looked or neglected. Over the last decade, concrete rehabilitation has become recognized to be a "stand alone" discipline requiring very specialist knowledge and expertise.

The latest advances in materials and techniques and the current state-of-the-art for concrete will be presented, together with concerns that require consideration when modern materials are used, particularly for the first time, or when they are used in combination.

In addition, the latest advances in materials and techniques and the current state-of-the-art will be presented for the rehabilitation of concrete structures. Case studies will be used to highlight failures, defects or deterioration that can often be caused by the selection of incorrect materials and rehabilitation techniques.

The many advances in rehabilitation technology that have occurred over recent years will be examined, together with how they can provide considerable benefit to the concrete rehabilitation industry - and ensure that we get it right the second time! The major objective of the course is to present a thorough review and a comprehensive update of the practical and technological state-of-the-art for concrete, including mix design, materials technology, specification, construction, testing and inspection The course has been developed to cover all aspects of designing, specifying and constructing concrete structures for improved durability

The course will be of special interest to facility and asset owners and their

representatives, together with every one who is involved in the design, specification, construction, rehabilitation and maintenance of concrete structures and buildings, including Government Agencies, Specifies, Architects, Engineers and Consultants, Inspectors and Technicians, as well as the Contracting, Engineering and Maintenance teams.

Course Objective

This course will provide the delegates with the latest information and knowledge of modern materials, techniques and practices for designing, constructing, investigating, rehabilitating, maintaining and monitoring concrete structures and buildings Delegates will have the opportunity to learn proven methods for success in identifying and avoiding costly problems that could lead to failures.

Who Should attend?

Any civil engineer with interest in learning about the modern methodology for control the construction quality and managing the construction execution on site with an advanced technique. It is foreseen that individuals from the following backgrounds may attend:

- Construction engineers
- Maintenance Engineers
- Design structural engineers
- Supervision engineer
- Planners

Course Outline

Understanding Concrete & Why it is Vulnerable to Attack

What are the problems?

- Climate
- Quality of materials & workmanship
- Corrosion
- Chlorides & sulfates

What makes concrete durable?

- Influence of porosity
- Influence of cracks

Designing concrete for durability

- Key considerations
- Material proportions and their influence

Constructing, Inspecting & Testing Durable Concrete

- Dealing with temperature
- Handling & Placement
- Consolidation
- Finishing & Curing
- Quality Control
- Quality Assurance
- Inspection
- Sampling & Field Testing
- Tests on Hardened Concrete

The Investigation Process & Rehabilitation Strategy Development

- Preliminary Studies
- Condition Surveys

Non-Destructive Testing (NDT)

- Impact-Echo
- Ultrasonic
- Ground Penetrating Radar
- Impact-Echo
- Cause Analysis
- Repair Failure Case Studies

Rehabilitation Strategy Option

- Removal, replacement and reconstruction
- Reconstruction
- Chloride Removal
- Cathodic Protection (Impressed & Passive)
- Corrosion Inhibition
- Crack Repair Materials & Practices
- Joints, Joints and Jointing Systems
- Rehabilitation Strategy Options

Implementing a Rehabilitation Strategy

Concrete Repair Materials

- Material Types
- Desired Properties
- Chloride Removal
- Spraying, Toweling and Forming Repairs
- Rehabilitation Case Studies

Building Envelope Repair & Maintenance

- Defining the Building Envelope

- Mechanisms of Deterioration
- Building Envelope Inspection Procedures
- Building Investigation Case Studies

Building Envelope Repair & Maintenance

- Building Envelope Repair and Maintenance
- Building Envelope Repair Case Studies
- Preventative Maintenance Techniques
- Inspection & Testing

Building Envelope Construction Mistakes & Failures

- The Construction Process
- Causes of Failure
- Top 10 Construction Mistakes
- Forensic Investigations
- Construction Mistake Case Studies
- Building Failure Case Studies

Building Design Errors & Omissions

- The Design and Construction Issues
- Forensic Investigations
- Design Error Case Studies
- Current Trends
- North American Construction Claims
- The Real Cost of Poor Design
- Avoiding Common Design Errors - 10 Essential Steps

The Scandinavian Academy for Training Center adopts the latest scientific and professional methodologies in training and human resource development, aiming to enhance the efficiency of individuals and organizations. Training programs are delivered through a comprehensive approach that includes:

- Theoretical lectures supported by PowerPoint presentations and visual materials (videos and short films).
- Scientific evaluation of participants before and after the program to measure progress and knowledge acquisition.
- Brainstorming sessions and practical role-playing to simulate real-life scenarios.
- Case studies tailored to align with the training content and participants work nature.
- Assessment tests conducted at the end of the program to evaluate the achievement of training objectives.

Each participant receives the training material (both theoretical and practical) in printed form and saved on a CD or flash drive. Detailed reports, including attendance records, final results, and overall program evaluations, are also provided.

Training materials are prepared professionally by a team of experts and specialists in various fields. At the end of the program, participants are awarded a professional attendance certificate, signed and accredited by the Scandinavian Academy for Training Center.

Program Timings: 9:00 AM to 2:00 PM

The program includes:

- A daily buffet provided during the sessions to ensure participants comfort.
- A closing ceremony on the final day to distribute certificates and celebrate participants achievements.
- **Note: All prices are exclusive of 15% Value Added Tax (VAT).**
